

YWC Website Design Notes

Description

For the purpose of a portfolio, I want to create a functional home page for Dad's YWC company using HTML, CSS, JavaScript and a database language (tbd).

Features

From top to bottom

- Logo and Company Name that reroute user to the home page.
- Logo has an animation when hovered.
- Menu bar with different categories, each one is highlighted when hovered and clicked.
- Appropriate categories have dropdown lists when clicked, and at least one has a sub list within it.
- Featured wines bar with; Image of bottle and Label, star rating, key Description of characteristics (sweet, earthy, etc.).
- Clicking anywhere on this bar redirects to that wine page
- Bar scrolls through automatically but can be manually panned from left to right.
- Bar should wrap instead of going back to the start.
- News bar with text information about shipments and new availability.
- Article images should fade into the rest of the bar and bar should cycle through articles vertically.
- Calendar with upcoming public events that moves to the side and displays additional information on the event on the right side of the screen.
- Footer bar with contact information (social media, phone numbers, for personal and business inquiries, email for personal and business inquiries, Customer service contact information).
- Footer bar also contains links to the tabs on the menu bar.
